16.	Unhealthy choices	M	Limit consumption of unhealthy choices	> 7 choices/week	≤ 3 choices/week

Abbreviations: A, adequacy component; M, moderation component; O, optimum component; Q, qualitative component; R, ratio component.

Adequacy components are derived from a guideline that recommends increasing intake. Moderation components are derived from a guideline that recommends limiting intake. Dairy is an optimum component based on an optimal range of intakes, whereas coffee is a qualitative component based on the type of coffee. Ratio components are based on the ratio of intake of healthy and unhealthy products in that food group.

^{*} This component consists of two subcomponents (a and b). Each subcomponent has a maximum score of 5 points.

[†]maximum of 40g cheese can be included.

^{*}maximum of 4g lean fish can be included.
